

General Information

In-Fuse0™ is a blend of plant extracts, surfactants, natural polysaccharides, and carboxyl/phenolic acids. This product is designed to keep drip irrigation tubes clean and free of mineral deposits season long while delivering to the soil a soil conditioner. The soil conditioner will promote water and nutrient penetration and promote a population increase of beneficial soil microorganisms. Regular applications of **In-Fuse0™** will help protect the investment in drip irrigation systems and reduce costly repairs.

Net Contents: 5 gallons
Weight per Gallon: 8.54 lbs.

**SHAKE WELL BEFORE USING
CAUTION: KEEP OUT OF THE REACH OF CHILDREN
HARMFUL IF SWALLOWED**

Directions For Use

In-Fuse0™ should be applied through all drip irrigation systems by injecting the recommended rate during the last portion of the irrigation set. Ideally this is during the last two hours. This method of application allows some of the product to remain in the drip tubes until the next set. If the system has not been using regular applications of **In-Fuse0™** and is clogged, then a higher rate of product is recommended, after which the drip tubes may have to be opened and flushed out.

Recommendations/Mixing Instructions

Dilute **In-Fuse0™** with water at 1 part **In-Fuse0™** with 9 parts water (1 gallon **In-Fuse0™** to 9 gallons water). Inject the dilute mixture at 20 oz per 0.1 acre inch of water per hour during the last 1 to 2 hours of the irrigation set. An application chart with further instructions is available through your dealer.

In-Fuse0™ is compatible with many fertilizers. If unfamiliar with its use, be sure to check with **Northwest Agricultural Products** for compatibility, or perform a jar test, mixing each product in the same ratios as to be field applied.
