GENERAL INFORMATION

POLYBOR 5™ is an effective, readily available source of boron for soil and foliar application. It may be applied in water or mixed with most liquid fertilizers, micronutrients, or pesticides. A jar test for compatibility is recommended before mixing a large batch.

Foliar Application: Apply with enough carrier to cover all foliage. Early morning or late evening application give best results. Boron is not easily translocated within the plant, therefore multiple foliar applications at low rates during the growing season are most effective.

Soil Application: Apply with enough carrier to cover all foliage. Soil-applied boron must be moved into the root zone to be absorbed by the plant. This can be accomplished by irrigation, rainfall, or tillage. For soil use in tree crops, incorporate **POLYBOR 5™** into the soil within the drip line by irrigation or tillage.
